AMES AND THE COLLEGE.

[illegible]

COLLEGE GROUNDS.

THE COLLEGE DOMAIN includes about 840 acres. Of this, about 120 acres are set apart for College grounds. These occupy the high land of the southeast part of the farm, and include the campus, shrubbery, plantations, young forestry plantings, the arboretum, the botanical gardens, the growths, and the surroundings of the professors' dwellings. Gravel drives, cement and gravel walks lead in all parts of the grounds and to the various buildings, and the true principles of landscape gardening have been so faithfully followed in their application here that the walks, paths, drives, and drives, as to make the entire campus a large and beautiful park. The view of the surrounding country, from the upper slopes and towers of the main Building, is one of wide extent and great beauty. An extensive road, the main highway of the farm, leads from forestry and College Park. This also furnishes delightful walks and drives.

BUILDINGS.

FIFTEEN commodious buildings have been erected by the State at a cost of about \$300,000, for the exclusive use of the various departments of the College. In addition to these, there are dwelling houses and other buildings devoted to farm stock, machinery and work in science, mechanics and agriculture. These buildings are heated mainly by steam and lighted by electricity. A thorough system of water-works has been put in connection with the buildings, furnishing a supply of good water for the living and mechanical purposes of the College community. The buildings are clustered around one of the finest campuses in the country. This affords delightful scenery and a most healthy environment and atmosphere.

MARGARET HALL.

A MOST ECONOMICAL and inviting building is provided for the living of young women in the College. It is designed with choice architecture, composed of brick, molder with slate, and finished with taste. It occupies one of the most slightly locations on the campus, giving the most pleasing outlook to its occupants. It is provided with steam heat, and electric lighting, and is equipped with the most improved modern conveniences. It is neatly and tastefully furnished throughout. A large dining room is in connection with the building, with a capacity of eight hundred students. The department of Domestic Economy is also located in this building and open to all young women of the College, and will be assigned to new students in the order of their application. The young women are under the direction of an efficient corps of women.

APPARATUS AND EQUIPMENT.

IT IS THE PRIDE of the College authorities, embracing the trustees and faculty, to equip each department with the tools, apparatus and facilities that will most wisely and thoroughly furnish a suitable outfit for the efficient work of the students and faculty. The methods of the laboratory in demonstration, experiment and construction, are largely and successfully joined with the books and the recitations. In most of the departments, the laboratories are given largely to the practical work of the students in the laboratories. These methods make a student clear, strong and ultimately independent. New appropriations are made every year for the renewal and enlargement of the apparatus in the respective departments.

Iowa State College of Agriculture
and the Mechanic Arts

FREE TUITION.

TUITION IS FREE to all students of Iowa. The State and the Nation have placed buildings, endowment and equipment, a college plant to the amount of a million and a quarter of dollars, within reach of the young men and women of Iowa, prisoners with opportunities, but free of charge for schooling. If the youth will not their part they can secure here a first-class, modern education at a low and most reasonable expense. For \$100 a college year a student can pay all his necessary expenses and live well. He can spend more than that if he desires, but it will be largely extras in addition to his boarding and necessary living expenses. Laboratory fees at the actual cost of usage or breakage are charged in connection with the respective departments. Persons who come from outside the State will be charged \$24 tuition per year.

THE COLLEGE LIBRARY.

THE LARGO LIBRARY, numbering a branded thousand volumes, the most ordinary ones of which are available to all, is open to 99 per cent of that number. Our College Library has been selected by specialists with a view of embracing the most useful and interesting of the new works, bearing particularly upon the respective lines of study in the College. They have succeeded in procuring a large number of new books, 11,000 volumes and about 2,500 pamphlets, and are making strenuous efforts to increase these each year. Magazines and periodical literature bearing upon the various departments of study may also be easily reached of all. The Library Room is a reading and reference room contained. The books are arranged in a systematic order, and may be easily reached of every student. Special instruction in library work is given the Freshmen each year, and the Librarian is always ready to give instruction to the members of the Library. The Librarian and Assistant Librarian give their time to helping the students in the library, and are always ready to give instruction in library work. The room is open the most of the day, and sends outside of church hours. This is the great advantage of the library, and the most important of the departments, and the most useful of the departments, and the most useful of the departments, and the most useful of the departments.

THE COLLEGE possesses a comprehensive and well ordered Museum of Natural History. It begins with the lowest order of life and ascends by specimens and representative examples to man, the highest. These have been chosen with a view to class study and illustration. The student thereby has the advantage of not only the description and picture of the book, but the real representation prepared from life. New additions are constantly making to the collection each year. All the students can use the Museum free of charge.

SANITARY HALL.

THE COURSE possesses a neat Sanitary Hall, a quiet and pleasantly located. It has two storages. The lower floor is devoted to office, room for examinations, a kitchen and dining room for the students. The upper floor is reserved for the care of any among the students who may be sick. Each student on entering the College needs to pay a deposit fee of \$2.50. In case of sickness during the college term, this fee provides each student with nursing and medical attendance, except in the case of contagious diseases. The College has a catalogue. An experienced physician of considerable experience is employed by the College. The hospital provided a great blessing to the students. The hospital provision is extended to students outside the College buildings, provided that no calls shall be made on the students during their residence and that the usual deposit fee of \$2.50 is made within the first ten days of the term.

COLLEGE DEGREES.

THEN OR MORE courses of study, less than 1 year

- Following degree and certificate, are offered the following courses:
1. The course of Bachelor of Agriculture, 3 years.
 2. The course of Veterinary Medicine of three years.
 3. The course of Bachelor of Science in Mechanical Engineering of three years.
 4. The course in Mechanical Engineering of three years leads to the degree of Bachelor of Mechanical Engineering.
 5. The course of Civil Engineering of three years leads to the degree of Bachelor of Civil Engineering.
 6. The course in Electrical Engineering of four years leads to the degree of Bachelor of Science in Electrical Engineering.
 7. The course in Mining Engineering of four years leads to the degree of Bachelor of Science in Mining Engineering.
 8. The course in Science as Related to the Industries of four years leads to the degree of Bachelor of Science.
 9. The course in General and Domestic Science of four years leads to the degree of Bachelor of Science. Ladies may take any other course desired.
- Students must come to Agriculture and Dairying, certificate properly indicating the completion of certain studies will be given.
- Students desiring a large and good named character, who desire to pursue studies in any department, may apply for admission as a candidate for a degree, with, upon application to the President, be admitted upon the following conditions:
1. That the student shall be a native-born citizen of the United States.
 2. That he shall be of good moral and irreproachable parentage of the work.
 3. That he shall come to work strictly to the line of study chosen at the time of his admission.
 4. That he shall be of sufficient age, and have good work, laboratory and other practice equivalent to work, required of regularly classified students.
 5. That he shall be of sufficient ability to pass the daily recitations and examinations, with students

Master degrees are given only after two years' post-graduate study, one year in residence and one in absence.

C. G. LEE.
PRESIDENT.

THE BUSINESS MEN'S ASSOCIATION organized and supported by the leading business and professional men as well as enterprising citizens of the City of Ames, Iowa. Their object is to advertise the unequalled advantages of Ames: First, as a distributing point for manufacturing. Second, as a Railroad Center for forwarding mass, is reach all points any hour in the day. Third, as an Educational Center, being the seat of the great Iowa Agricultural College. Fourth, the only city owning its own electric light and water system of the first order. Fifth, as the most rapid growing, the largest number of public spirited citizens, and the home of all church denominations. We invite correspondence from all seeking a location, from firms wishing distributing locations, from any one regarding any specific information pertaining to the industrial energy of Ames.

ANALYSIS OF THE SYSTEM OF UNITED STATES LAND SURVEYS

COPYRIGHT, 1900.

METES AND BOUNDS.

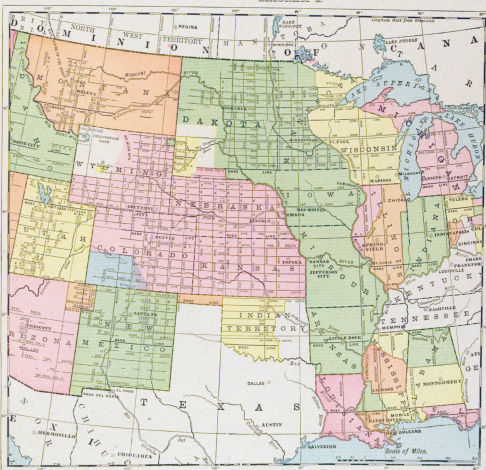

Up to the time of the Revolutionary War, or until about the beginning of the present century, land, when parcelled out, and sold or granted, was described by "Metes and Bounds," and that system is still in existence in the following States, or in those portions of them which had been sold or granted when the present plan of surveys was adopted, viz., New York, Pennsylvania, New Jersey, Delaware, Maryland, Virginia, North and South Carolina, Georgia, Tennessee, Kentucky, Texas, and the six New England States. To describe land by "Metes and Bounds," is to have a known land-mark for a place of beginning, and then follow a line according to the compass-needle (or magnetic bearing), or the course of a stream, or track of an ancient highway. This plan has resulted in endless confusion and litigation, as land-marks decay and change, and it is a well-known fact that the compass-needle varies and does not always point due North.

As an example of this plan of dividing lands, the following description of a farm laid out by "Metes and Bounds," is given: "Beginning at a stone on the Bank of Doe River, at a point where the highway from A. to B. crosses said river (see point marked C. on Diagram 1); thence 40° North of West 100 rods to a large stump; thence 10° North of West 90 rods; thence 15° West of North 80 rods to an oak tree (see Witness Tree on Diagram 1); thence due East 150 rods to the highway; thence following the course of the highway 50 rods due North; thence 5° North of East 90 rods; thence 40° East of South 60 rods; thence 10° North of East 200 rods to the Doe River; thence following the course of the river Southwesterly to the place of beginning." This, which is a very simple and moderate description by "Metes and Bounds," would leave the boundaries of the farm as shown in Diagram 1.

MERIDIANS AND BASE LINES.

DIAGRAM 2.

The present system of Governmental Land Surveys was adopted by Congress on the 17th of May, 1795. It has been in use ever since and is the legal method of describing and dividing lands. It is called the "Rectangular System," that is, all its distances and bearings are measured from two lines which are at right angles to each other, viz., the Principal Meridians, which run North and South, and the Base Lines, which run East and West. These Principal Meridians are established, with great accuracy, by astronomical observations. Each Principal Meridian has its Base Line, and these two lines form the basis or foundation for the surveys or measurement of all the lands within the territory which they control.

Diagram 2 shows all of the Principal Meridians and Base Lines in the central portion of the United States, and forms the territory governed by each Meridian and Base Line may be readily distinguished. Each Meridian and Base Line is marked with its proper number or name, as are also the Standard Parallels and guide (or auxiliary) Meridians.

Diagram 3 illustrates what is meant when this method is termed the "Rectangular System," and how the measurements are based on lines which run at right angles to each other. The heavy line running North and South (marked B. M.) is the Principal Meridian, in this case the 56th Principal Meridian. The heavy line running East and West (marked B. L.) is the Base Line. These lines are used as the starting points or basis of all measurements or surveys made in territory controlled by the 56th Principal Meridian. The same fact applies to all other Principal Meridians and their Base Lines. Commencing at the Principal Meridian, or Standard Parallel, of six miles, lines are run North and South, and East and West to the Meridian. This plan is followed both East and West of the Meridian throughout the territory controlled by the Meridian.

These lines are termed "Range Lines." They divide the land into strips or divisions six miles wide, extending North and South, parallel with the Meridian. The divisions are called "Ranges." The divisions are numbered from an upward corner, along the Base Line, to the Principal Meridian. For instance, the first division is designated by Roman characters I, II, III, IV, V, VI, VII, and so on, until the territory covered by another Principal Meridian is reached. In the same manner the Range Rost of the Meridian is designated, the divisions being always numbered to indicate the direction from the Principal Meridian. See Diagram 2.

Commencing at the Base Line, at intervals of six miles, lines are run East and West parallel with the Base Line. These are designated as Township Lines. They divide the land into strips or divisions six miles wide, extending East and West, parallel with the Base Line. This plan is followed both North and South of the Base Line, and the territory covered by another Principal Meridian and Base Line is designated by Roman characters. The divisions are numbered from one upward, both North and South of the Base Line, and their numbers are indicated by figures. For instance: The line six miles distant north of the Base Line is Township 1 North; the next is Township 2 North; then comes Township 3, 4, 5, and 6, North, and so on. The same plan is followed South of the Base Line. The line six miles distant south of the Base Line is Township 1 South; the next is Township 2 South, Township 3 South, and so on. The "North" or "South" (the initials N. or S. being generally used) indicates the direction from the Base Line. See Diagram 2.

These Township and Range Lines, crossing each other, divide the land into squares, or sections, which are six miles square, or as nearly that as it is possible to make them. These Townships are a very important feature in locating or describing a piece of land. The location of a Government Township, however, is very readily given when the number of the Township and Range is given, by merely mentioning the name of the Township, the Range, and the Principal Meridian. For instance, Range 4 East of the 10th Principal Meridian, is at once located on the square marked ★ on Diagram 3, by counting eight times north of the Base Line and 4 times west of the Meridian.

TOWNSHIPS OF LAND.

TOWNSHIPS are the largest divisions of land run and by the United States Surveyors. In the Governmental Surveys the Lines are the first to be run, and a Township Center is established every six miles and marked. This is called "Townshiping." After the Township Centers have been carefully located, the Section and Quarter Section Centers are established. Each Township is six miles square and contains 36,000 acres, or 36 square miles, as near as it is possible to make them. This, however, is frequently made impossible by: (1st) the presence of lakes and large streams; (2nd) by State boundaries not falling exactly on Township Lines; (3rd) by the convergence of Meridians or curvature of the earth's surface; and (4th) by inaccurate surveys.

Each Township, when it is one of the rectangular ones referred to, is divided into 36 squares, which are called Sections. These Sections are intended to be one mile, or 360 acres, square and contain 400 acres of land. Sections are numbered consecutively from 1 to 36, as shown on Diagram 4. Beginning with Section 1 in the Northeast Corner, they run West to 6, then East to 12, then West to 18, and so on, back and forth, until they reach with Section 36 in the Southwest Corner.

Diagram 4 shows a Township as it is divided and plotted by the government surveyors. These Townships are called Government Townships or Congressional Townships, to distinguish them from Civil Townships or organized Townships, as frequently the lines of organized Townships do not conform to the Government Township lines.

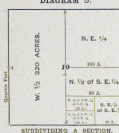

SECTIONS OF LAND.

DIAGRAM 5 illustrates how a section may be subdivided, although the Diagram only indicates a few of the many subdivisions into which a section may be divided. All Sections (except Fractional Sections) are supposed to contain 400 acres—a number easily divisible. Sections are subdivided into fractional parts to suit the convenience of the owners of the land. A half section contains 200 acres; a quarter section contains 100 acres; half of a quarter section contains 50 acres, and so on. Each piece of land is described according to the portion of the section which it occupies—so the Northwest quarter of Section 16; or the Southeast quarter of the Southwest quarter of Section 10. Diagram 5 shows how many of these subdivisions are plotted, and also shows the plan of describing and locating them, by initial letters as each parcel of land in the Diagram is marked.

As has already been stated, all Sections (except Fractional Sections which are explained elsewhere) are supposed to contain 400 acres, and even though mistakes have been made in surveying, as in making sections larger or smaller than 400 acres, the Government Surveyors recognize no variation, but still grant each regular section containing 400 acres "more or less."

The Government Surveyors are not required to subdivide sections by running lines within them, but they usually establish Quarter Section Centers on each side of a section, at the points marked A, B, C, and D, on Diagram 3. After establishing Township centers, Section Lines are the next to be run, and section corners are established. When these are carefully located the Quarter Points are located at points as nearly equidistant between Section Corners as possible. These corners when established by Government Surveyors cannot be changed, even if it is conclusively shown that mistakes have been made which cause some sections or quarter sections to be either larger or smaller than others. The laws, however, of all the States provide certain rules for local surveys to follow in dividing Sections into smaller parcels of land than has been outlined in the Governmental surveys. For instance, in dividing a quarter section into two parcels, the distance between the Government Corners is carefully measured and the new point is located at a point equidistant between the two. This plan is followed in running out "quarters," "forties," "twenties," &c. In this way, if the Government division is incorrect or erroneous, each portion gains or loses its proportion. This is not the case, however, with Fractional Sections along the North or West sides of a Township, or in joining a lake or large stream.

DIAGRAM 5.

SUBDIVIDING A SECTION.

DIAGRAM 4.

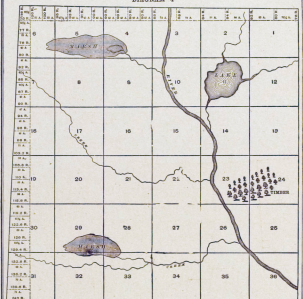

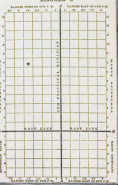

DIAGRAM 2.

FRACTIONAL PIECES OF LAND.

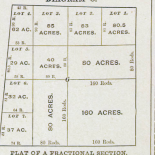

CONGRESSIONAL Townships very considerably vary in size and boundaries. Mistakes made in surveying and the fact that Meridians converge as they run, with certain Townships varying more or less from the 36,000 acres which a perfect Township would contain, See Diagram 4. In arranging a Township into Sections all the surplus or deficiency of land is given to, or taken from, the North and West tiers of Sections. In other words, all Sections in the Township are made full 400 acres—except those on the North and West, which are given all the land that is left after forming the other 25 Sections.

Diagram 4 illustrates how the surplus or deficiency is distributed and the Sections affected. It will be seen that Sections 1, 2, 3, 4, 5, 6, 7, 18, 19, 20, 31, and 32, are "Fractional Sections," or the Sections which are affected if the Township overruns or falls short. Instead of the Fractional Sections, all of the surplus or deficiency of land (over or under 400 acres) is carried to the "North" or "West" side of the Township Line. These pieces of land are called "Fractional Forties" or "Fractional Eighties," as the case may be. Diagrams 4 and 5 show the manner of marking the acreage and outlining the boundaries of these "Fractionals."

Diagram 6 illustrates how the surplus or deficiency of land lands of these Sections is distributed and which "forties" or "eighties" it affects. From this arrangement it will be seen that in any Section that touches the North or West Township Lines, the Southeast Quarter may be full—400 acres—while another quarter of the same Section may be much larger or smaller. Frequently these fractional "forties" or "eighties" are noted as shown in Diagram 6. They are marked with the letters "F" or "E" and the number of acres. Diagrams 4 and 5 show the manner of marking the acreage and outlining the boundaries of these "Fractionals."

In addition to this fact, mistakes of measurement are constantly and almost unavoidably made in running both Township and Range lines, and if no new starting points are established the State would become confused and inaccurate, and the size and shape of Townships would vary greatly by the time the surveys had extended even a hundred miles from the Base Line and Principal Meridian. In order to correct the errors and variations caused by the difference of latitude and straightness of the "Correction Lines" (or Guide Meridians and Standard Parallelism) established at frequent intervals, usually as follows: North of the Base Line a Correction line is run East and West parallel with the Base Line, usually every twenty-four miles. South of the Base Line a Correction Line is run North and South, usually every thirty miles. Both East and West of the Principal Meridian "Correction Lines" are usually established every 48 miles. All Correction Lines are located by careful measurement, and the succeeding surveys are based upon them.

DIAGRAM 6.

FLAT OF A FRACTIONAL SECTION.

living on his farm on Section 6, Union Township, could relate some very interesting incidents in regard to hunting deer, as he was very fond of that kind of sport, and rarely, if ever, missed bagging his game.

The first Norwegian to settle in the Township, came in the spring of 1851; there were about twenty-five families in all. The Shastahs being among them, and in fact they were the first to organize the Norwegian settlement. Erick Shastah is now living in Charlotte.

The first school house built in the Township, was built in the spring of 1854 on Section 1, where the Century now stands; land now owned by the Chaffinwicks. It was made of round logs, and had neither earth for the floor. A young man by the name of G. Brown, was the first teacher.

The first church services were held in March 1854 at a private house in Buller's Grove. Rev. Marks of the U. R. church was the preacher. There are at the present time, seven churches in Palestine Township.

The first wagon road leading from Palestine Township to Nevada, was made in the spring of 1854. G. W. Kelley and a company of men took a team and wagon, cut a lot of poles, and started for Nevada. When they got to the High places, we would stop stakes or when we came back, we followed the stakes; and by so doing, we made a trail across the country during the following summer.

G. W. Kelley and two brothers, Samuel and John and a brother-in-law, a Mr. Vocum, enlisted in the army in the fall of 1861; served three years and nine months. Samuel Kelley died on his way home.

The writer is now past seventy years of age, and is the oldest settler living in Palestine Township.

REMINISCENCE.

By ANSON HERRICK.

Story County was organized in 1853 in the month of April. The County was only divided into two voting precincts; one embracing the eastern half of the County, the other the western half.

There was an election called to elect county officers. The election was somewhat quiet, as eastern precinct wanted all the officers; however the western. There were 45 votes polled, the western precinct had a majority of 39 votes. The poll books were taken to Ross Berry to be examined.

The first elected Court that was held in the county was held on the prairie near Shonk river in township 34 range 24 in what is now called Franklin township, and was presided over by Judge McKay.

There was no jury impaneled, except Grand Jury. They held their court in a small cabin in the edge of the timber, and there was only one case on the docket. That was the case of murder against a man by the name of Hiram Lovell for the killing of his wife. He was indicted, but took a change of venue to Polk county and there was found guilty, and sentenced to the State Prison for life, at which place he died in a few years.

The next court was held in Nevada. There were only two houses in the town at that time. Judge McFarlan presided, and those who had to attend court, went there in covered wagons, and slept in them. The Judge had his shot gun with him, and mornings and evenings he would go out on the prairie to shoot prairie chickens, as they were very numerous at that time.

Franklin township when first organized, embraced the Congressional limit and the west half of what is at this time called Milford township, making township 35½ miles the eastern half of what is Milford, was attached to Nevada township.

Mr. J. B. Kestley from Ohio, settled near Shonk river in 1853, near the confluence of the Kestley branch, which was so named in account of Mr. Kestley being the first settler that located near that stream.

The first school house we had was a small cabin, the dimensions of which was about 19x17 feet; a clapboard roof, the floor was made of loose wood partridge hewed on side, and laid on cross log sleepers. Our first teacher was Miss Sarah McCallister and by the way, a very good teacher.

Mr. Kestley was the first Justice of the Peace of Franklin township, and Mr. Wm. Arnsworth was the first constable. After a time more settlers came in and began to settle on the prairie, as the first settlers all located at or near the timber. As emigration increased, they began to locate further out on the prairie, and soon there was a demand for larger and better school houses, which answered the purpose for school and church privileges, for a series of years.

REMINISCENCE.

By J. J. GILLISTON.

The development of Story County, Iowa, since the writer's residence therein, July, 1897, has been marked and marvelous; mostly, however, in the direction of highly improved farms, substantial homes in the towns, numerous and desirable business blocks, commodious churches and public and citizen buildings.

Thirty years ago the County was regarded as among the least

desirable in the state; inasmuch as a large part was low and swampy, and the settling was often made that such land was valueless, and would only be fit for sale at a loss on or in; being then readily bought at from three to six dollars per acre. The same had now selling readily at from fifty to seventy-five dollars, largely due to the system of tilling, which makes the most productive in the County. Being situated in the geographical center of the state, and traversed by two of the leading railroads; the C. & N. W. and the C. M. & St. P., is destined to retain the proud position she now holds, as one of the best in all that goes to make for the benefit, happiness and prosperity of her citizens. In our County is situated the Iowa State Agricultural College near Ames; as institutions of which any citizen may be justly proud; and being fostered and cared for by the great state of Iowa, in all the years to come, leave no impress on thousands of our best citizens.

Our farmers are prosperous and happy in large and commodious homes, farm buildings, improved stock and all that go to make farm life desirable. Our population is made up of all classes of people with a large percentage of Scandinavians, who are among our best and most respected citizens.

The county is well supplied with shipping facilities, and with the completion of the D. M. L. P. & N. E. R. R. now building through our County from Iowa Falls to Des Moines, there will be only two townships in the County without a railroad. The County in fact has been always well offloaded by men of business and intelligence, and has never had a breath of scandal or defamation in public accounts.

Nevada, the County Seat, has, during the time, risen from a small hamlet in a thriving city of 2,500, and possesses fine business blocks, water works, electric lights, telephone, public residences, public buildings and all else necessary to make it a most desirable place for home or business.

The city was incorporated as a town in Nov. 1863, and reorganized as a city of the second class in 1883. Geo. A. Keffau being the first Mayor under the town incorporation, and T. F. W. Wansley the first under the city incorporation, at which time the city was divided into four wards. Our city is largely represented in churches, charitable organizations, clubs, fraternal societies, etc. We claim the distinction of having the oldest Mosaic Museum in the state, in the person of Jas. Hawthorne, who was made a M. M. in 1844; he being now in his 65th year of age.

Much could be said further in regard to the past and present of our County and City, but the limited space for this item will prohibit the saying of more. What is said of Iowa, viz.: "In all that is good, Iowa affords the best," will equally apply to Nevada and Story County.
